Monitoring Add On* Details

Good natured and cutting edge? Smart maintenance that actually provides advanced warning of system breakdowns.

How has WatchDog helped \$\frac{1}{2}\$ customers in the past?

WatchDog alerted Bill that the motor operating his furnace was intermittently stopping and restarting. Undetected, the problem would've caused the motor on his unit to die prematurely. Instead, WatchDog caught the issue just weeks before his warranty expired, which saved Bill \$1,500 in parts.

PPL Electric Utilities mistakenly kept shutting off the electricity to Wes's air conditioning unit (using an energy curtailment box). WatchDog caught PPL's mistake and gave Wes the information he needed to convince PPL to fix the problem.

Natalie hired us to replace her air conditioning system. She asked to keep her existing thermostat since she was familiar with its operation. Normally, this wouldn't be a problem, but on the same evening of the install WatchDog alerted us that the new air conditioner's compressor was short cycling. The next morning, our senior tech went to her home to investigate. That's when he uncovered the cause of the malfunction: Natalie's thermostat. Evidently, it had slowly killed her old air conditioning unit. Without the help of WatchDog, her thermostat would've done the same to the new system.

One cold Friday afternoon, around 4:45 pm, WatchDog alerted us that an elderly customer was in danger. The unit's pressure switch clogged and shut down her furnace. This caused the temperature inside her home to drop rapidly. We notified the customer and arrived at her home by 5:20pm to make the repair.

How does the WatchDog work?

Using Wi-Fi connected smart sensors, WatchDog proactively analyzes your HVAC system's performance to keep you ahead and aware of any maintenance issues.

Custom sensor technology

Ten smart sensors are installed by our technicians on your furnace and air conditioner. *Please note: only forced air systems are eligible for monitoring.

Proactive HVAC analysis

These sensors stream and analyze the status of your system, providing detailed performance checks. If a warning is detected, an alert will be sent in real time.

In addition to the benefits that come with your Blue Membership, WatchDog members receive the following for only \$99/year or \$8.25/month:

- 24/7 Statistical Monitoring by Sensi
- 24/7 Electronic Alert Monitoring by \$2
- Monthly efficiency reports sent directly to you
- System Failure Prevention Alerts
- System Maintenance Alerts
